

Breaking new ground in room acoustics: Ceiling systems made of composite mesh designed for the highest sound absorption without additional insulating material

WORLD WIDE WEAVE

Picture 1-2: Two versions of the highly effective acoustic Composite (CMP) mesh with 12 and 25 mm thick honeycomb supporting plate and gold anodised Alu 6010 mesh.

Picture 3: The ceiling system with CMP-Alu 6010 mesh ensures pleasant acoustics in the conference room of the “King of England” building in Stuttgart, Germany.

Picture 4: The ceiling systems allow lights and sprinklers to be integrated effortlessly thanks to recesses incorporated during production. Mesh: Atlantic.
